

Segues

ViewController Navigations

ViewController Navigation

- ✔ Use Segues for navigation between ViewController
- ✔ Programmatically call a ViewController
- ✔ How to pass information to ViewController

Segues

Segue	iPhone Behaviour	Navigation	Example Usage
Show (Push)	Pushes new view controller onto navigation stack	Adds back button	Hierarchical navigation, drilling down into content
Show Detail	Same as Show on iPhone (pushes onto stack)	Adds back button	Use when you want adaptive behavior on iPad (replaces detail view in split view)
Present Modally	Presents view controller modally, covering previous screen	No back button; typically needs custom dismiss action	Temporary or focused tasks, settings, data entry forms
Popover	By default, presents full screen. Can be customized to show as small overlay	No back button; dismisses on tap outside (if customized as overlay)	Additional options, quick info, date pickers (when customized to show as
Unwind	Dismisses one or more view controllers to return to a specific previous view controller	NCustom (typically triggered by a button or action)	Returning to a specific previous screen, simplifying complex
Custom	Defined by developer	Defined by developer	Unique transitions or behaviors not covered by standard segues
